

# 11 Conceptual cultivation and homegrown theorizing

## The case of/for the concept of influence

*Eyüp Ersoy*

### Introduction

Homegrown theorizing in international relations (IR) has recently gained more salience in disciplinary debates thanks to persistent calls for theoretical pluralism in international relations. The fundamental rationale underlying such disciplinary appeals is the consequential absence of theoretical perspectives originating in the worldviews and experiences of human geographies outside the West. Peoples of rich diversity in their historical and contemporary practices in IR are generally relegated to secondary, and even subordinate, analytical categories, such as “the periphery,” in relation to “the West,” despite the unmistakable fact that their dispositions, preferences, and actions have been equally significant in the ultimate outcomes of global processes. The majority of the world, called “the non-West,”<sup>1</sup> who are constitutive of the reality that is called IR are not interpretative of that reality, and are only deemed illustrative for Western theory.

Although a corpus of non-Western theoretical approaches equivalent to that of Western theoretical approaches, in composition, sophistication, and progression has yet to emerge in the discipline, a formative recognition of the necessity and feasibility of constructing indigenous perspectives to understand, explain, and predict international phenomena based on local intellectual sensibilities has incrementally suffused disciplinary discussions. Since the initial step in any social theorizing is pertinent to concepts, studies on homegrown theorizing have necessarily encountered the exigency of engaging conceptual inquiries. Here, first, the essential role of concepts in homegrown theorizing is discussed, and the varieties of native conceptual resources on which homegrown attempts of conceptual cultivation draw are introduced. In addition, the ways through which conceptual cultivation in homegrown theorizing can be performed are presented. Second, a novel definition of the concept of influence is propounded since a rigorous and systematic conceptual cultivation of influence is still lacking in IR literature despite its perfunctory extensive usage. Besides, a special analytical emphasis is given to the relationship between influence and power. In the final section, conceptual exclusivity in homegrown theorizing and the analytical shortcomings it creates are critically discussed, and the explanatory potential of the concept of influence in homegrown theorizing is assessed, and affirmed.

## **Conceptual cultivation and homegrown theorizing**

The indispensability of concepts in theorizing in social sciences arises from the simple methodological necessity that concepts “are some of the main building blocks for constructing theoretical propositions.”<sup>2</sup> Concept formation is ontologically crucial in identifying the phenomena and defining their attributes to be theorized. Accordingly, concepts determine the ontological contours of theory construction and the ensuing theoretical analysis by signifying certain phenomena with preconceived properties in social reality by simultaneously excluding some other phenomena or by excluding some other properties of the same phenomena from the process of theory construction. The construction of concepts, on the other hand, is a dynamic process that is subject to innovations, revisions, disputations, and contestations, more often than not susceptible to analytical confusion.<sup>3</sup> In this study, I prefer “conceptual cultivation” instead of the more mechanical term of “concept construction” inasmuch as concepts are like living things embedded in the systems of meaning they are “planted,” to which they acclimate in constantly transmuting varieties with outcomes ranging from sprouting to flourishing and sometimes to withering, semantically speaking.

As a case of conceptual cultivation in international studies, a passionate theoretical debate on the nature and extent of security persists. Security is an “essentially contested concept,”<sup>4</sup> argues Barry Buzan, whereas for David A. Baldwin, “security is more appropriately described as a confused or inadequately explicated concept than as an essentially contested one.”<sup>5</sup> Essentially complicated or not, security is a cultivated concept in IR. Depending on the referent object of security, or the unit of analysis, the scope of security research has been explored from “rice security” to “space security.” It has also been “cultivated” at different levels of analysis: encompassing human/individual security, societal security, state/national security, regional security, international security, and global/world security.<sup>6</sup> Among the conceptual derivations of security eliciting extensive analytical interest is ontological security, which refers “to the need to experience oneself as a whole, continuous person in time-as being rather than constantly changing-in order to realize a sense of agency.”<sup>7</sup> Another derivative concept constituting the basis of an influential school in security studies, i.e., the Copenhagen School, is securitization.<sup>8</sup> In brief, conceptual cultivation of security has proved to constitute a fertile research agenda in IR.

Conceptual cultivation in theoretical studies in pursuit of devising indigenous analytical frames of reference is preceded, as it seems, by a self-reflexive process of exploring and exploiting native conceptual resources.<sup>9</sup> Among conceptual resources, first, the notions and convictions of classical thinkers in non-Western contexts are revisited, reinterpreted, and reconfigured to develop indigenous approaches to IR. This reflects a similar formative trajectory in the emergence of Western IR theory, which claims to represent an intellectual pedigree originating in the works of historical figures from Thucydides onwards. In the Chinese context, for example, the ideas of Sun Tzu and Confucius are recurrent themes

of studies on homegrown approaches, while in the Indian context, the views of Kautilya, also called Chanakya, are habitually drawn upon.<sup>10</sup> Second, historical traditions of thought, beliefs, and conventions are invoked instead of particular sages or scholars. Accordingly, for instance, Confucianism instead of Confucius, and Islamic thought instead of Ibn Khaldun are appropriated as conceptual resources.<sup>11</sup> Historical experiences of non-Western peoples and polities are reflected upon to reveal authentic modes of thought and action in IR.<sup>12</sup> There can be other conceptual resources of equal analytical import in homegrown theorizing, such as foundational civilizational/cultural texts, foreign policy doctrines of political leaders, and contemporary state of affairs in IR.<sup>13</sup>

In conceptual cultivation, what is of consequence is not the morphology of a concept but its semantics. For instance, referring to the concept of influence as *nufūd/nofooz* (transliterations of the same word *نوفن* in Arabic and Persian respectively) in an Arabic, Iranian, or in general, Islamic context does not spontaneously impart indigeneity to the concept. The semantic criteria for the indigeneity of influence in these contexts is its peculiar meanings with authentic connotations. Drawing on local conceptual resources, conceptual cultivation for homegrown theorizing can be performed in five distinct ways.<sup>14</sup> First, a researcher can engage in novel conceptualization by appropriating a common linguistic unit, be it a word or a phrase, and attributing idiosyncratic properties to it, effectively rendering the word or phrase into a concept. Security is a common word employed in everyday language, and yet with the ascription of unique qualities, it is translated into a concept in international studies through a myriad of conceptualizations. These qualities, nonetheless, may not be necessarily derived from already existing indigenous conceptual resources inasmuch as these qualities constitute indigenous qualities in and of themselves as parts of the novel conceptualization.

Second, a researcher can redefine a concept already in use in Western theorizing by virtue of imparting indigenous properties to it. For example, one can reconceptualize human security by reconfiguring its referents as belief/religion, life, wealth/property, procreation/offspring, and mind/intellect from an Islamic perspective, the protection and preservation of which is considered the ultimate purpose of Islamic jurisprudence. Third, a researcher can take a non-conceptual derivative of a concept, which is again already in use in Western theorizing, usually in its adjectival form or phrasal alteration, and attribute indigenous characteristics to it. In Western theorizing, securitization and human security are two foremost examples, and the same approach is equally valid, at least in theory, for non-Western theorizing. Fourth, a researcher can opt for an indigenous concept, and apply it to theoretical undertaking in its authentic sense or senses (a concept in a sophisticated tradition of thought can acquire multiple meanings in the process of intellectual speculation). Harmony is a cultivated concept in Chinese political philosophy, and its referral in its original sense(s) in studies of China's IR is, for the most part, a preference to establish a coherent conceptual framework for indigenous theoretical approaches. Fifth, on the other hand, revising its authentic sense(s), a researcher can redefine an indigenous concept for analytical

purposes, such as its application in a different level of analysis or its application to a different unit of analysis.

### Conceptual cultivation of influence

In the lexicon of the discipline of IR, influence is a ubiquitous word that is yet to be rigorously conceptualized, and it is a phenomenon in international politics that is yet to be extensively theorized. This is a curious disciplinary case for some reasons. First, “sphere of influence” as a phrase has been in use in the academic literature since it was first coined at the Berlin Conference (1884–85), which divided the African continent into the “spheres of influences” of European colonial powers.<sup>15</sup> In other words, it is not a novel conceptual innovation nor is it recently incorporated into the discipline of IR from other disciplines. Second, concepts similarly in use in the IR literature like power and security have been excessively studied in the discipline both theoretically and empirically to the extent that these studies have constituted separate literatures of their own.<sup>16</sup> Third, influence as an uncultivated concept has been extensively employed in academic as well as non-academic studies becoming an inseparable part of the IR literature. In most of these studies, however, there appears to be no attempt to formulate and clarify the concept of influence, that is, no attempt for conceptualization, and the meaning of influence is just assumed as self-evident, or the author’s understanding of the concept of influence is implicit within the text and can only be inferred indirectly from the text.

Therefore, with regard to influence, there seems to be a conceptual and theoretical underdevelopment in IR literature, which requires, above all, a systematic and yet lucid conceptual cultivation of influence. On the other hand, influence, as a phenomenon, is inherently related to power in IR, and is frequently confused with it. Accordingly, introducing a distinct definition of influence necessitates differentiating the two concepts. Hence, power needs to be clarified first.

“Power, like love, is easier to experience than to define or measure,” Joseph S. Nye, Jr. poetically acknowledges.<sup>17</sup> Nonetheless, the enticing challenge of defining or measuring power, like love, has been embraced by scholars of IR with ardor. Scholars of IR have depended on divergent conceptions of power in their analyses, and there has yet to be a consensus on a common definition. These diverse conceptions of power frequently challenged, contradicted, complemented, and overlapped each other. It is no surprise that the simple linguistic characteristics that two ontologically distinct entities can be signified by the same concept is lost in the exhaustive conceptual debates on power. Power is a polysemous word essentially signifying two ontologically discrete phenomena, and thus having two distinct meanings. There have been attempts to define these two discrete phenomena with two different concepts. One early attempt came from Raymond Aron, who pointed out that “French, English and German all distinguish between two notions, *power and force (strength)*, *puissance et force*, *Macht und Kraft*,” analogous to the Turkish notions of *kudret* and *kuvvet*.<sup>18</sup> To Aron, it did not seem “contrary to the spirit of these languages to reserve the first

term for the human relationship, the action itself, and the second for the means, the individual's muscles or the state's weapons."<sup>19</sup> A similar dichotomy has recently emerged distinguishing between the action itself and the means with the concepts of "power-over" and "power-to," though the precise and unanimous definitions of "power-over" and "power-to" have yet to be agreed upon among scholars.<sup>20</sup> Even so, two conceptions of power, one pertinent to the means of interaction, and the other pertinent to the outcome of interaction, are discernable.

The first conception of power, which can be called "power as capacity" (Power I), refers to the material and non-material, tangible and intangible, resources possessed, and employed if need be, by an actor to have an effect on the outcome of a process of interaction. This conception of power is espoused, for instance, by John J. Mearsheimer. According to Mearsheimer, while others "define power in terms of the outcomes of the interactions between states," by asserting that power "is all about control or influence over other states," for him power "represents nothing more than specific assets or material resources that are available to a state."<sup>21</sup> The second conception of power, on the other hand, which can be called "power as capability" (Power II), refers to the ability of an actor to have an effect on the behavioral outcome of a process of interaction. Accordingly, while power as capacity can be ascertained at any point, in and before a process of interaction, power as capability can only be ascertained at the end of a process of interaction. Although most conceptions of power appraise power as a capability, they differ on the causal mechanism through which certain resources possessed by a state are translated into the ability of state to have an effect on the behavioral outcome of an interaction. I argue that the nexus translating "power as capacity" (Power I) into "power as capability" (Power II) is influence.

In the scholarly literature of IR, influence is in widespread circulation, employed to denote various international phenomena ranging from the international "influence of potato" to "influence warfare" between terrorists and governments.<sup>22</sup> It may refer to policy behaviors of various actors ranging from single personalities to international organizations.<sup>23</sup> In most of the research, influence is employed in the basic senses of effect or control, in a similar fashion Kenneth N. Waltz observes regarding the concept of "reification." He argues that such "loose use of language or the employment of metaphor" serves limited purpose other than "to make one's prose more pleasing."<sup>24</sup> In some other research, however the author's understanding of influence is implicit within the text, and can only be inferred indirectly from the text.

The word "influence," coming from Latin means "flowing into," akin to its Turkish translation *nüfuz*, which, coming from Arabic, means "penetration." There are tentative definitions, or at least definitional attempts, for influence in IR literature. An ambiguous definition, for example, was introduced by Frederick H. Hartmann according to whom influence was simply "unconscious power."<sup>25</sup> To Hartmann, "in a more formal sense, power is the strength or capacity that a sovereign nation-state can use to achieve its national interests," and "the very existence of power has an effect," meaning that "no state can ignore

the possibility that the power of another state will be used.”<sup>26</sup> Accordingly, he clarifies, “the power of that other state is in effect used, and plays some part both in the initial formulation of policies and in the subsequent relations of the states concerned, even where it is not intentionally put to use.”<sup>27</sup> In short, influence, as unconscious power, ensues. Paul R. Viotti and Mark V. Kauppi, on the other hand, provide a circular definition of influence. They argue

a state’s *influence* (or capacity to influence or coerce) is not only determined by its capabilities (or relative capabilities) but also by (1) its willingness (and perceptions by other states of its willingness) to use these capabilities and (2) its control or *influence* over other states.<sup>28</sup>

This oblique definition of influence, it seems, confuses more than it clarifies.<sup>29</sup> A study on regional security strategies in Southeast Asia introduces a novel concept, “balance of influence,” based on a conception of influence as encapsulating

a range of other modes and means [than military and economic resources] by which states with relatively less preponderance of power may still wield the resources and capacity to shape their strategic circumstances by virtue of status, membership, normative standing, or other persuasive abilities.<sup>30</sup>

According to Evelyn Goh, the conception of “balance of influence” permits researchers “to expand the number of key reference points from which they may compare resources, and highlights that a state’s influence and power may come as much from ideational sources as from material sources.”<sup>31</sup> Goh’s conceptualization treats influence as a derivative of non-material instruments and sources of interstate diplomacy. Another study defines influence in a footnote as “power as control over actors,”<sup>32</sup> and then refers to Jeffrey Hart’s definition of control over actors, i.e., “the ability of A to get B to do something which he would otherwise not do.”<sup>33</sup> This definition of power was originally Dahl’s definition of power.<sup>34</sup> The author acknowledges this definition as the standard definition of power, as evident in the works of David A. Baldwin<sup>35</sup> and Nye, Jr.<sup>36</sup> Although these scholars regard it as a definition of power, not influence or control, he argues that “this [definition] lumps together two related but distinct elements.”<sup>37</sup> Ironically, in his attempt to define influence as a distinct element, he concludes by subsuming influence with power under the same definition.

As a final example, in his entry of *Influence* to the *Encyclopedia of Power*, Keith Dowding indicates two different definitions of influence. In the first definition, influence “is usually considered a form of verbal persuasion,” in the sense that “information given by A to B will change B’s decision. That information influences B’s decision.”<sup>38</sup> Here, influence is considered a subset of power. In the second, influence is defined as “the socially induced modification of behavior” and thus, distinct from power, i.e., “structurally determined abilities to change behavior,”<sup>39</sup> According to Dowding, “such a demarcation between power and influence is only definitional,” and “whether influence is a subset of power

or a different category altogether is only of any interest if the difference has any effect on the manner in which we examine and explain society."<sup>40</sup> This rather equivocal and evasive evaluation of the distinction between two concepts is unfortunate since it fails to deliver any conceptual clarity between influence and power.

Despite its extensive usage in scholarly studies in IR, a systematic conceptualization of influence presenting a perspicuous definition of influence and a coherent exposition of its relationship with power is arguably still underdeveloped in the literature.<sup>41</sup> Here I propose that influence can be defined as the *effect* of actor A (henceforth A) over the *decision* of actor B (henceforth B) through A's involvement in the *decision-making* process of B. Therefore, influence is not a cause; it is an effect. In addition, it is not a potentiality; it is an actuality. A has influence over B insofar as the decision of B reflects the preference of A that would otherwise not been reflected. This definition of influence depends on a basic assumption that a state's foreign policy behavior is not a necessary outcome of a state's automatic response to external stimuli. More importantly, a state's foreign policy is assumed to be invariably a contingent outcome of a decision-making process that is susceptible to involvement of other states and actors in different degrees, ways, and forms.

The pervasive confusion in understanding and explaining power, influence, and the relationship between the two originates in the conflation of their points of reference. While power can be about both decision and behavior depending on its type (Power I or Power II); influence is exclusively about decision. This conceptual ambiguity can be noticed, for example, in Thomas C. Schelling's discussion of forcible action. According to Schelling, "the only purpose [of inflicting suffering], unless sport or revenge, must be to influence somebody's behavior, to coerce his decision or choice."<sup>42</sup> For Schelling, as it seems, altering the behavior of somebody and altering the decision of somebody are identical. However, the act of taking a decision and the act of taking an action, even when it is based on that decision, are two ontologically distinct acts despite being temporally sequential. Taking a decision, let's say, to drink water and taking an action of drinking water are two separate personal acts. By the same token, taking a decision to invade a country and taking an action of invading a country are two separate international acts.<sup>43</sup> Simply, deciding to do something is one thing while doing that thing is another. Since there is always a processual mechanism through which a decision is or is not translated into an action, the underlying assumption of most conceptions of power that there is a spontaneous translation of decision into behavior is empirically erroneous. Needless to say, enacting a decision, and thereby translating it into behavior is contingent upon a multitude of factors.<sup>44</sup>

Nevertheless, the concurrent use of the concepts of influence and power in a great many studies evinces the general understanding of the inherent association between them. Most of the studies use power and influence conjointly,<sup>45</sup> some talk of "power without influence,"<sup>46</sup> some talk of "influence without power,"<sup>47</sup> and some talk of "influence of power."<sup>48</sup> This inherent association in the form of

Figure 11.1 The nexus between Power I, Influence, and Power II.

a process connecting power as capacity (Power I), influence, and power as capability (Power II) can be formulated in a simple fashion.

Power I, as mentioned before, refers to the material and non-material, tangible and intangible, *resources* possessed and employed by A to have an effect on the behavioral outcome of a process of interaction with B by means of having *an effect on the decision* of B. While the ultimate objective of A exercising Power I is to have an effect on the behavior of B, the proximate objective of A exercising Power I is to have an effect on the decision of B. The mere act of exercising Power I does not necessarily culminate in producing an effect on the decision of B due to intervening factors that condition the translation of Power I into an effect on the decision of B.

Influence, as mentioned before, is the *effect* of A over the *decision* of B through A's involvement in the *decision-making* process of B by virtue of exercising Power I. Accordingly, in verbal form, to influence means to have an effect on the decision of B by virtue of exercising Power I. In adjectival form, being influential means having an effect on the decision of B by virtue of exercising Power I. It is imperative to distinguish between influence act and influential act here. Influence act is a volitional act with whose exercise an effect on the decision of B is *intended*. On the other hand, influential act is a volitional act with whose exercise an effect on the decision of B is *achieved*. Another significant point to stress here is that both A and B are willful agents in possession of the essential attribute of agency, that is, the capacity of making a decision. Accordingly, in this sense, non-willful, that is, non-self-conscious, entities cannot be a party to an influence relationship, neither as a subject nor as an object. Both A and B are necessarily willful agents.

Power II, as mentioned before, refers to the *ability* of A to have an effect on the behavioral outcome of a process of interaction with B by means of having *an effect on the decision* of B. There are two highly significant points that need articulation. The first is the relationship between influence and Power II. Influence as *the effect*

Figure 11.2 Transition mechanism from Power I to Influence to Power II.

of A on the *decision* of B is not the cause of Power II as *the ability* of A to have an effect on the *behavior* of B. There is not a causal relationship between the two as Figure 11.1 would suggest. Influence and Power II are ontologically distinct and yet require each other to exist; they are like the two sides of the coin. Only with influence, can Power II come into existence, and Power II exists as long as influence exists. The second is that influence is a necessary condition for Power II, but not a sufficient condition. For Power II to exist, influence must exist in advance; still, the prior existence of influence does not necessarily lead to Power II. In other words, the effect on the *decision* of B (influence) does not necessarily lead to an effect on the *behavior* of B (Power II) due to intervening factors that condition the translation of *decisional effect* (influence) into *behavioral effect* (Power II). The respective points of reference for Power I, influence, and Power II are shown below.

### **Influence and homegrown theorizing**

An empowered disciplinary unanimity has emerged in IR on the West-centric, and specifically Eurocentric, disposition of prevailing theorizing. It is argued, for example, that “the bald fact of Western dominance” is beyond controversy in the established IR theory that manifests itself in “two obvious, and partly reciprocal, ways.”<sup>49</sup> Implicitly relating to the questions of epistemology and ontology in theorizing, the first, the scholars continue, “is the origin of most mainstream IRT in Western philosophy, political theory and/or history. The second is the Eurocentric framing of world history, which weaves through and around much of this theory.”<sup>50</sup> Epistemological privileging of Western modes of knowledge production entrenches cognitive patterns postulating Western superiority in both the theory and practice of IR. This privilege treatment is trenchantly criticized from several viewpoints. Mohammed Ayoob, for instance, contends that in the discipline “power translates into domination in the sphere of the manufacturing and reproduction of knowledge. Domination in the arena of knowledge further legitimizes inequality in the international system.”<sup>51</sup> In terms of the ontological foundations of West-centrism/Eurocentrism of IR theory, the defiant conviction is that “theories about the structures, processes, and events that define and recur within the international realm are based to a large extent on the history of the European states system and its role in world affairs since the sixteenth century.”<sup>52</sup> As a result of this exclusive entitlement of Western epistemology and ontology for “conceivable” theorizing in IR, the discipline is now considered predominantly hegemonic.<sup>53</sup>

*Table 11.1* Points of reference for Power I, Influence, and Power II

Power I	Resources
Influence	Decision
Power II	Behavior

In order to challenge, transform, and transcend the hegemony of the West in IR theorizing, persistent calls with numerous propositions are put forward. It is suggested, for example, that greater attention be paid “to the genealogy of international systems, the diversity of regionalisms and regional worlds, the integration of area studies with IR, people-centric approaches to IR, security and development, and the agency role of non-Western ideas and actors in building global order.”<sup>54</sup> In a similar vein, arguing that the discipline of IR is “dominated by Western modernity that is premised upon a self-other binary in which the other’s identity must be negated and agency be denied,” another scholar calls for the decolonization of IR theory for a “democratic ontology.”<sup>55</sup> Another strand of research with an avowed interest in promoting homegrown theorizing has concomitantly focused on the state of the discipline periodically reviewing theoretical developments in non-Western contexts, as well as in the West for purposes of comparison.<sup>56</sup> Indeed, a diverse array of studies advancing homegrown theoretical perspectives that are predicated on conceptual cultivations appropriating indigenous conceptual resources have been proffered.

Most of these studies, nonetheless, have evinced an analytical proclivity to expound a particular set of international phenomena observable in non-Western contexts with a particular native concept or a set of native concepts, forging an exclusive and immutable semantic affiliation between the concept and what it signifies. For example, in the Chinese context, two indigenous concepts, *tianxia* and harmony, have been cultivated by Chinese scholars in a quite elaborate manner to exclusively explain China’s understanding and associated practice of IR.<sup>57</sup> Transmuting conceptual indigeneity into conceptional idiosyncrasy, this insular practice of homegrown theorizing, called conceptual exclusivity here, can incur manifold degenerative shortcomings. First, it can readily reproduce the intellectual tendency of formulating analytical propositions only to constitute seemingly neutral and objective theoretical foundations for the promotion of parochial and subjective interests, both ideational and material, of the agents of theorizing, effectively retrogressing to problem-solving theorizing. It is argued, for example, that demonstrating “how non-Western alternatives [to the Westphalian system] can be even more state-centric,” the reconceptualization of *tianxia* by Chinese scholars “presents a popular example of a new hegemony where imperial China’s hierarchical governance is up-dated for the twenty-first century.”<sup>58</sup>

Second, in the pursuit of theoretical pluralism, conceptual exclusivity would culminate in theoretical particularism, which, in turn, would stimulate theoretical exceptionalism, treating each non-Western context singularly. As an example, one of the three components of contemporary Chinese exceptionalism, according to Feng Zhang, is harmonious inclusionism, which

can be most effectively examined by tracing three recent discourses in China’s intellectual circles: the application of the ancient idea of “harmony with difference” (*he er butong*), the ongoing official discourse on the “harmonious world” (*hexie shijie*), and the popular “neo-Tianxiaism” (*xin tianxia zhuyi*).<sup>59</sup>

The irony here is that the indigenous concepts of harmony and *tianxia* are cultivated by Chinese scholars only to postulate the exceptional character of China's vision, and thus practice, of IR. Theoretical particularism predicated on the exclusive semantic association of certain indigenous concepts with certain indigenous practices is liable to theoretical, and practical, exceptionalism. Furthermore, exceptionalism predicated on conceptual exclusivity is bound to constrain the receptivity of homegrown theoretical perspectives in other non-Western contexts in both theoretical premises and practical implications.

Third, in the quest to transcend West-centrism of IR theorizing, indigenous conceptual exclusivity becomes susceptible to duplicating the elemental dichotomous reasoning arguably underlying Western theorizing, albeit in native forms of dichotomies. As an example, again from the Chinese context, it is asserted "if modern Western cosmopolitanism is an important ideological source of Western IR, traditional Chinese cosmopolitanism embodied in the *tianxia* system is a vital force shaping the way Chinese people think about IR."<sup>60</sup> As opposed to Western cosmopolitanism whose "simple and abstract assumptions" conceal "selfish national interests under the slogan of 'universal good'," the advocates of Chinese cosmopolitanism argue that Chinese cosmopolitanism

takes "*tianxia*" (the whole world) as an indivisible public domain and considers the world's problems in the context of the whole world, enabling Chinese thinking to go past national interests for the interest, value and responsibilities of this world as a whole in the long-term.<sup>61</sup>

Accordingly, they claim that Chinese cosmopolitanism "is inclusive, and favors culture over force, and free-choice over coercion."<sup>62</sup> The irony here is that one of the most universal concepts of IR theorizing, that is, cosmopolitanism, is redefined with indigenous attributes only to advance a dichotomy comprised of two cosmopolitanisms with ethnocentric connotations.

To avoid the above shortcomings, indigenous theoretical approaches in IR can be propounded in congruence with different ways of conceptual cultivation. In this research, the second way of conceptual cultivation is adopted, which refers to redefining a concept already in use in Western theorizing by virtue of imparting indigenous properties to it. On the other hand, temporal and spatial embeddedness of theorizing in IR is in fact compellingly argued. The proverbial articulation of this position is perhaps Robert W. Cox's assertion that "theory is always *for* someone and *for* some purpose."<sup>63</sup> Nonetheless, such embeddedness is not antithetical to the temporal and spatial omnipresence of the phenomena that is being theorized. Even though concepts and their attributes are fashioned indigenously, and display temporal and spatial subjectivity, the phenomena they signify can be in objective existence in a broad temporal and spatial spectrum, such as conflict and cooperation. The seeming discrepancy between objective phenomena and subjective concept delivers an analytical space, which is imperative to surmount the prohibitive semantic inflexibility of conceptual exclusivity in homegrown theorizing. For example, influence acts are not confined to certain

temporal and spatial domains. Insofar as there are actors trying to affect the decisions of others, there are influence acts, and if they succeed, influence.

Furthermore, influence acts can still reveal temporal and spatial variations with reference to different criteria, such as the actors involved, and the means employed, which enables the indigenous theorizing of influence with authentic attributes in discrete non-Western contexts.

## **Conclusion**

The analytical departure point for homegrown theorizing is conceptual inquiries. Drawing on different indigenous conceptual resources, conceptual cultivation for homegrown theorizing can be performed in a number of ways. Indeed, incipient studies advancing homegrown theoretical perspectives predicated on authentic conceptual cultivations have been put forth for various non-Western contexts. Notwithstanding, in most of these studies, an analytical proclivity to expound a particular set of international phenomena observable in non-Western contexts with a particular native concept, forging an exclusive and immutable semantic affiliation between the concept and what it signifies, is noticeable. Conceptual exclusivity, as it is called here, can culminate in prohibitive semantic inflexibility potentially frustrating the progress in homegrown theorizing. A conceptual cultivation of influence is articulated here to provide further homegrown theoretical approaches a framework, which is potentially less prone to such exclusivity. Conceptual cultivation of influence transcends conceptual exclusivity by way of establishing an analytical framework, which can be local in conceptual view and, at the same time, universal in theoretical purview.

By virtue of a variety of parameters transforming global governance structures in contemporary IR, peoples and states of the non-West are no longer just quiescent objects of influence acts, and are incrementally evolving into assertive subjects of influence acts. Most IR theorists, it was once argued, “believe that studying the Western experience alone is empirically sufficient to establish general laws of individual, group, or state behavior irrespective of the point in time or the geographical location,” and “few look to the Third World to seek evidence for their arguments.”<sup>64</sup> The conviction seems to persist. However, challenging this conviction on theoretical grounds has implications beyond theory inasmuch as influence is existentially consequential for non-Western societies and states. Conceptual cultivation of influence in non-Western contexts with authentic qualities is of critical analytical utility to inquire into the varying dynamics, forms, and outcomes of influence acts for specific non-Western contexts. It has equal analytical value to investigate asymmetrical influence structures in IR repeatedly proved to be eviscerating for non-Western societies and states. Besides, influence acts are equally operational in interactions *among* non-Western contexts, which expands the scope of the relational variations of influence acts, simultaneously requiring and enabling indigenous conceptual cultivations of influence.

**Notes**

- 1 There are indeed several analytical categories employed in the discipline to identify and differentiate human geographies in IR with distinct and usually incongruent empirical scopes and normative connotations. One overarching classificatory template is the binary division of the world into two, one category being assigned to what is called “the West,” and the other category being assigned to “what-is-not-the-West.” The second category has been called the third world, the global south, the rest, and the developing world, among others. Abiding by the denomination that seems to have achieved widespread recognition in studies of and on homegrown theorizing, in this study “the non-West” is preferred.
- 2 Gary Goertz, *Social Science Concepts: A User’s Guide* (New Jersey: Princeton University Press, 2006), 1. Concurring with Goertz, another scholar adds that “concepts are the building-blocks of all inferences, and the formation of many concepts is clearly, and legitimately, theory-driven.” John Gerring, “What Makes a Concept Good? A Critical Framework for Understanding Concept Formation in the Social Sciences,” *Polity* 31, no. 3 (1999): 364. Emphasis in original.
- 3 See, for example, Leonidas Tsilipakos, *Clarity and Confusion in Social Theory: Taking Concepts Seriously* (Farnham: Ashgate, 2015). For example, in different theoretical fields of IR, the concept of structure is attributed distinct meanings. Even in the sub-fields of the same theory, structure would have come to assume very different meanings. Accordingly, in the absence of sedulous assessment, analytical confusion is bound to ensue.

- 7 Jennifer Mitzen, “Ontological Security in World Politics: State Identity and the Security Dilemma.” *European Journal of International Relations* 12, no. 3 (2006): 342. It is asserted, for example, that

while physical security is (obviously) important to states, ontological security is more important because its fulfillment affirms a state’s self-identity (i.e., it affirms not only its physical existence but primarily how a state sees itself and secondarily how it wants to be seen by others).

And furthermore, “nation-states seek ontological security because they want to maintain consistent self-concepts, and the ‘Self’ of states is constituted and maintained through a narrative which gives life to routinized foreign policy actions.” Brent J. Steele, *Ontological Security in International Relations: Self-Identity and the IR State* (Oxford: Routledge, 2008), 2–3. For an application of ontological security in a non-Western context see, Catarina Kinnvall, *Globalization and Religious Nationalism in India: The Search for Ontological Security* (Oxford: Routledge, 2006).

- 8 For a recent application of securitization in a non-Western context see, Mely Caballero-Anthony, Ralf Emmers and Amitav Acharya, eds., *Non-Traditional Security in Asia: Dilemmas in Securitisation* (Oxford: Routledge, 2016).
- 9 For example, Aydınli and Mathews suggest that homegrown theorizing “address an existing body of literature, but [find] a gap or inconsistency in that literature and then [add] to that existing literature with concepts derived out of the local context and case.” Ersel Aydınli and Julie Mathews, “Periphery Theorising for a Truly Internationalised Discipline: Spinning IR Theory out of Anatolia,” *Review of International Studies* 34, no. 4 (2008): 702.
